# DataLinQ®RDM Cloud

Optimized Management of CIED remote transmissions

Alleviate the burden on patient management and hospital IT infrastructure.

Save time by bringing in-clinic follow-ups and remote patient monitoring together with DataLinQ. Manage all transmissions and alerts from five major vendors in one system, streamlining workflows and eliminating unnecessary tasks.

- Continuously synchronize vendor portals with DataLinQ CRM, ensuring that transmissions appear the same in every environment.
- Transmissions processed in DataLinQ are automatically archived in the vendor portals.
- Navigate directly to vendor portals from DataLinQ CRM whenever a deep dive is needed, allowing quick access to additional transmission details.
- Track disconnected patients and devices across all vendor portals

Remote Device Management

This is why you use DataLinQ RDM Cloud
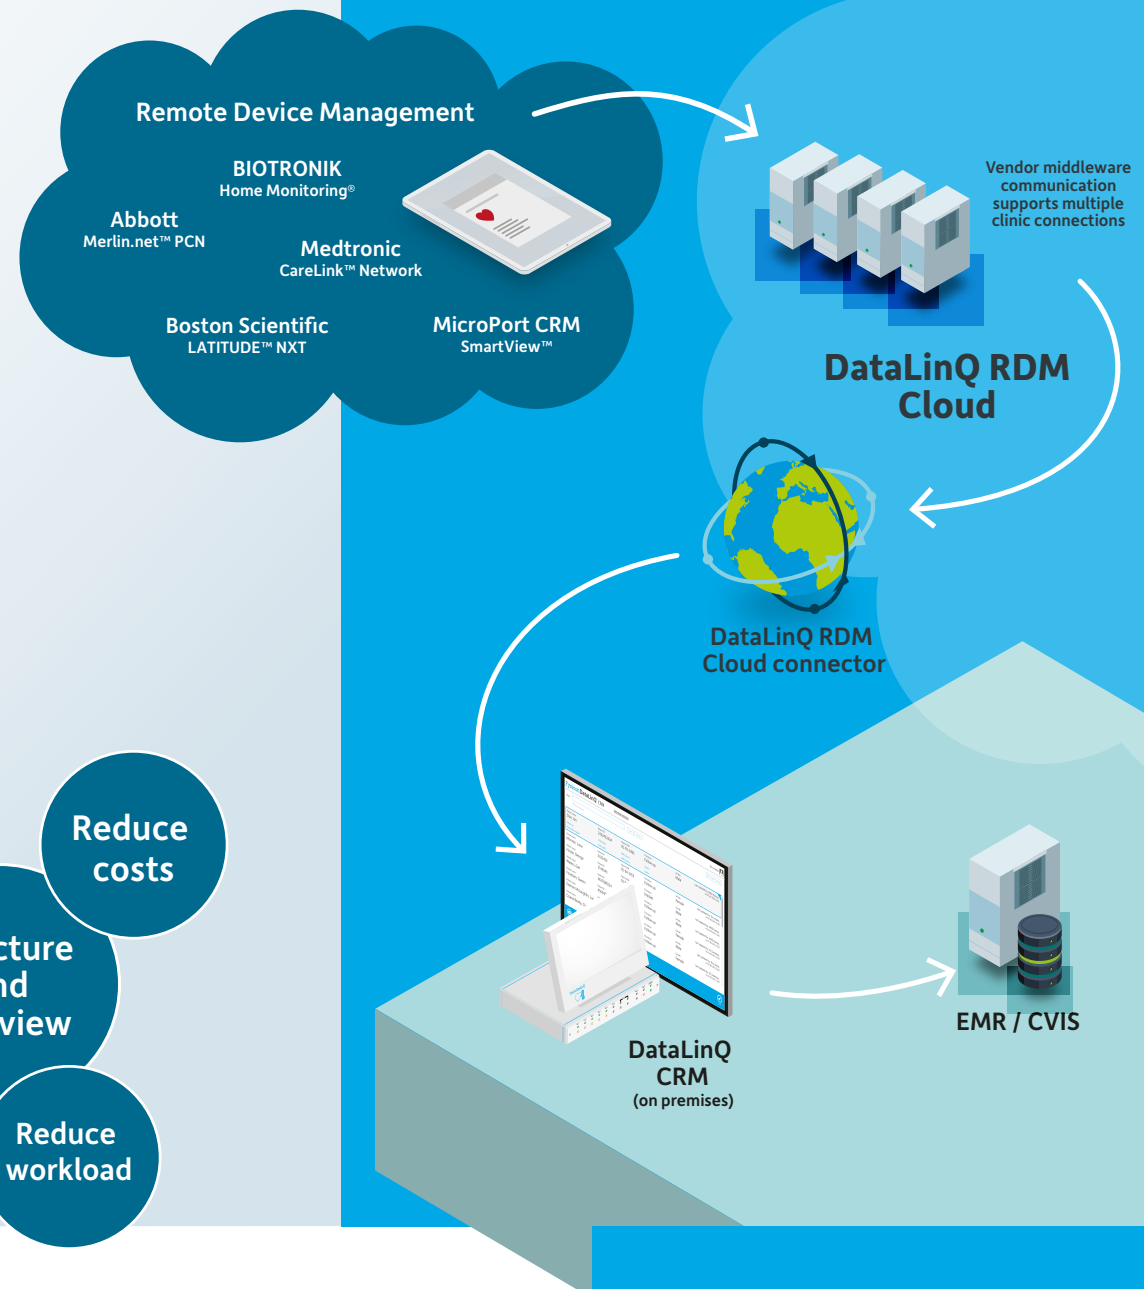

RDM managed by DataLinQ RDM Cloud

Secure and Reliable

With DataLinQ, security is built in from the start. A single connection covers all five vendors, ensuring a safe and seamless data flow. Fysicon continuously tracks portals, transmissions, and connectivity, preventing lost data and ensuring everything is accurately processed. All required infrastructure - servers, integrations, and software - is provided, eliminating the need for any hospital IT involvement.

Easy Setup

Getting started is effortless. As a fully managed system, DataLinQ RDM Cloud requires no complex setup and is operational within a day. It seamlessly integrates with the hospital's EMR via DataLinQ CRM, providing automatic data entry and custom reporting.

DataLinQ® RDM Cloud
One system, one workflow.
Simple, safe, and fully automated!
