

# DataLinQ® RDM Cloud

## Optimized Management of CIED remote transmissions

### Alleviate the burden on patient management and hospital IT infrastructure.

Save time by bringing in-clinic follow up and remote patient monitoring together with the fully automated DataLinQ CRM database.

- All transmissions are integrated using a **fast workflow** including automatic entry in customized reporting. No data entry or USB drives required, ever!
- RDM Cloud provides **bi-directional communication** with manufacturer portals.
- Have your Remote Device Management **up and running within 1 day**.
- RDM Cloud **stores data temporarily** and is hosted within an ISO27001 certified data center in the Netherlands.

#### DataLinQ RDM Inbox

- **Easy:** Process and manage remote transmissions from all vendors in one go
- **Insightful:** structured data through intuitive user interface
- **Automated:** custom reporting to your EMR
- **Extra:** functionalities to divide work for teams.

# This is why you use DataLinQ RDM Cloud

## RDM managed by DataLinQ RDM Cloud

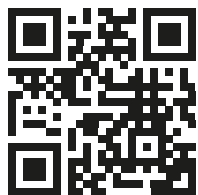

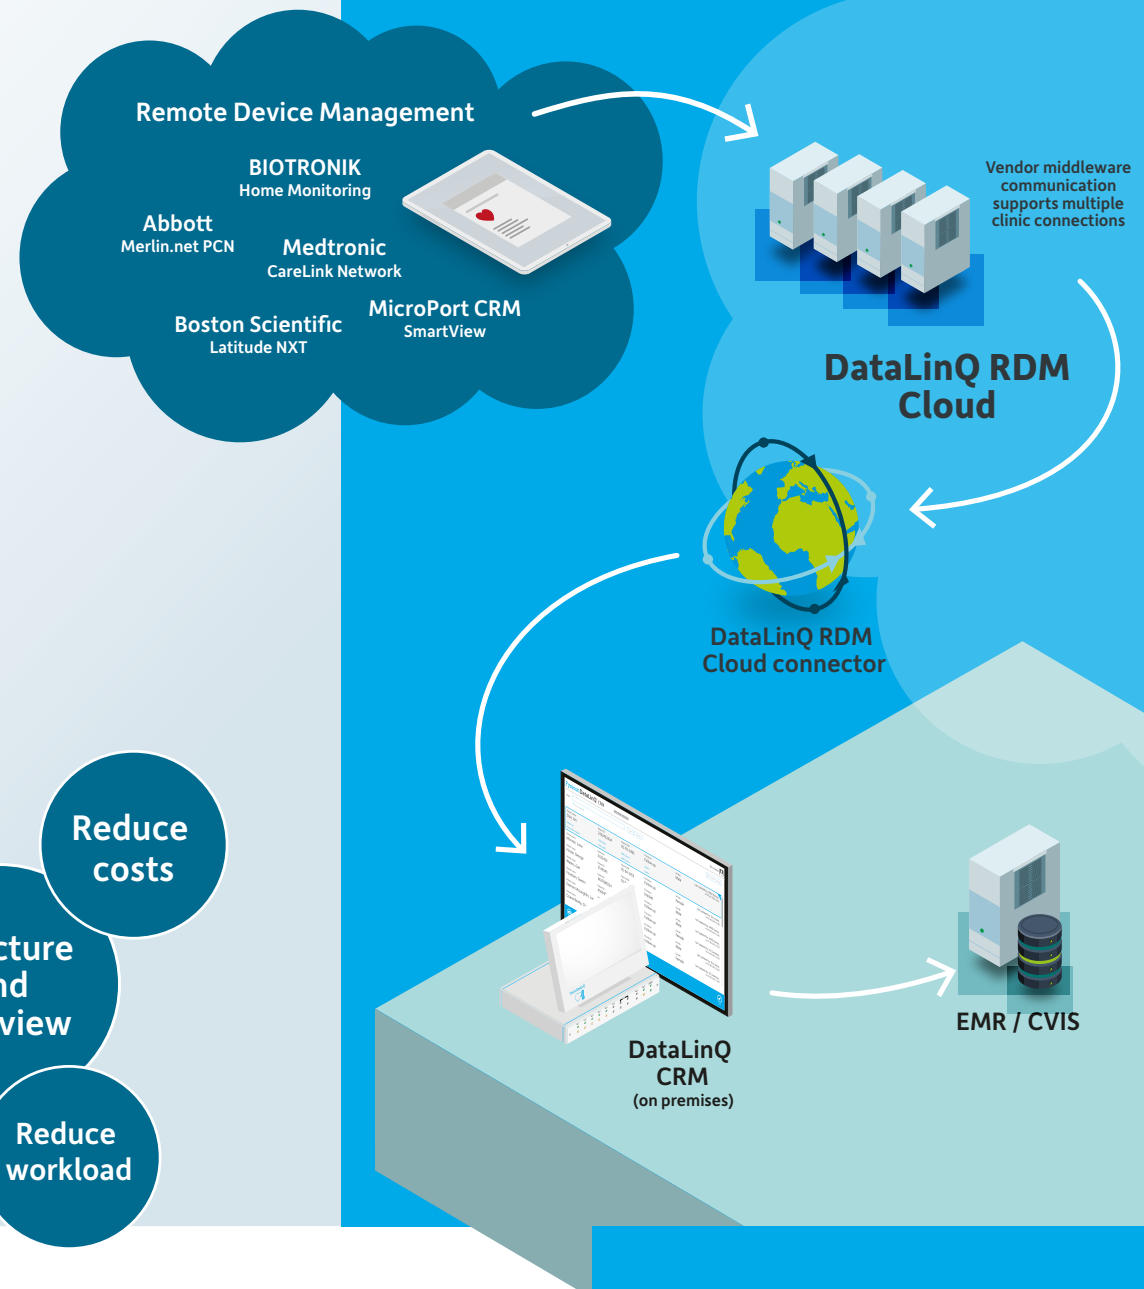

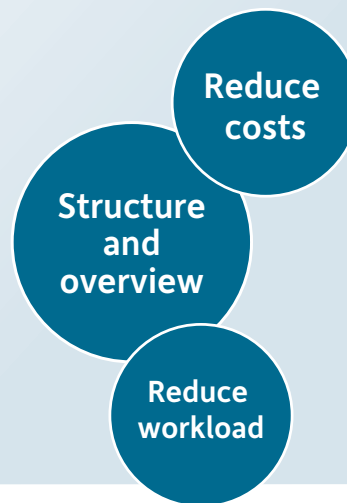

- 1 API-connection for all 5 CIED vendors
- All required infrastructure: including servers, integrations and required software

**No actions needed from hospital IT.**

**Fysicon provides:**

1. Full automatic data chain validation.
2. Continuous monitoring and direct updates if a connection is temporarily down.
3. Additional features with bi-directional communication:\*
  - Auto archiving transmissions on vendor portal
  - Direct navigation to the patient file on the vendor portal
  - Track disconnected devices/patients
  - Schedule future transmissions

*\*additional functionalities available from end Q2 2024*
